Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CCACGGCAACCTCCTCCACCTCCACCACCGCCTTTCATGAGCAGCAGCGGGGGCTCCGAC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to proline-rich extensin-like receptor kinase (PERK). The PERK nucleic acids and polypeptides are useful for increasing the resistance of plants to wounding and pathogens. These are also useful for producing transgenic plants with increased wounding and pathogen resistance compared with a wild type plant, as well as in assays for identifying and developing compounds to inhibit and/or enhance polypeptide function directly.
                                                                                                                                                                 ö
